

AdvancedBOL:

Digital Shipping Document Management

Driving intelligent inbound / outbound processes

One of the most important shipping documents, the **bill of lading** determines legal liability, freight ownership and establishes responsibility for freight.

Digitized bill of ladings enable the intelligent enterprise by eliminating paper, reducing errors, letting you create Advance Ship Notices faster, simplifying the claims-filing process, reducing chargebacks, and helping you gain control of a paper-laden process that's plagued by cost-containment issues.

AdvancedBOL benefits:

Simplify Shipping Logistics and Improve Accuracy

Empower dock employees to capture pertinent data right at the dock. Use our mobile app to record trailer numbers, seal numbers, carrier, and other data that helps to simplify shipping logistics, improve efficiencies, and reduce shipping errors.

Generate/ Capture Bill of Ladings at the Dock

Because they're generated as trucks are loaded, digitized bill of lading always include updated information. Dock employees can generate a bill of lading, use signature capture to generate a signed bill of lading, file and distribute in seconds. Paper-based copies at receiving or shipping are also scanned easily and retained.

Prove Load Validation and Store External Documents

AdvancedBOL lets you capture incoming/outgoing load photos, retain, distribute for customer/supplier compliance and claims validation, all easily accessible within SAP.

Using AdvancedBOL, you can:

Leverage Centralized Controls Via SAP Configuration Rules

Companies subject to Sarbanes-Oxley Compliance can set pickup and delivery rules that provide the necessary controls, all of which are also extended to mobile devices.

Utilize Standard or Custom Bill of Lading Formats

Customer Testimonial

“Until now, we kept paper copies in the shipping office. I don't think we could have found a copy of a bill of lading if we needed it. Having it all in SAP makes it easier to access and saves us time and money.” -- Shipping Manager for a Tier 1 Automotive Supplier.

Support for Most SAP Versions

- SAP ECC
- SAP S/4 HANA
- SAP Cloud
